

Outreach Command Center

Admin Operations Guide · PowerhouseTech · Internal

Portal: <https://powerhousetech.in/command-center> · Sign in with Google admin (shreyas@ / yash@powerhousetech.in).

This guide covers day-to-day admin work only: populate leads, approve contacts, control sends, and fix common issues.

Figure 1 — Command Center home (Overview + Workflow Control)

1. Daily admin loop

Do these in order. Everything else is optional.

- **1. Populate** — Discover new decision-makers (Apollo) for India or US.
- **2. Approve** — Review Pending contacts; Approve to email or Reject to skip.
- **3. Let schedule run** — India Mon–Sat 8:30 AM IST · US Mon–Fri 10:00 AM ET. Or use **Run Now**.
- **4. Check** — Email Log + workflow executions for failures; adjust caps if needed.

Status	Meaning	Your action
Pending	Found by Apollo, not emailed yet	Approve or Reject in portal
In_Sequence	Actively in the email cadence	None — workflow sends
Completed	Finished all follow-ups	None — or restart if needed
Rejected	Excluded (kept for audit)	None

2. Populate Leads (Apollo)

Pulls verified decision-makers into the sheet as **Pending**. Deduped across India + US tabs.

Populate Leads

Trigger Apollo Discovery (n8n). New contacts land as Pending for approval.

APOLLO LEAD CREDITS

420 / 1,000

Campaign

India

US

Max new leads (per_page)

25

Keywords (optional)

SaaS, EMS...

Location override (optional)

default: India

Populate Leads

This run = 25 credits (~1 per new lead) · Apollo balance 420 / 1,000 left

Figure 2 — Populate Leads: campaign, max leads, keywords, optional city, credit preview

Field	What to set
Campaign	India or US (required)
Max new leads	Default 25 · max 100 · ~1 Apollo credit each
Keywords	Optional industry filter (e.g. SaaS, EMS)
Location override	Optional city (e.g. Mumbai). Leave blank for country default.

Confirm the credit estimate before Proceed. New rows appear under Pending Approvals after Apollo finishes.

3. Pending Approvals

Human gate before any email. Approve → **In_Sequence**, step 0, blank next-send (due on next run). Reject → **Rejected**.

Pending Approvals									
ID	NAME	CONTACT	EMAIL	PHONE	LOCATION	STATUS	DATE	APPROVE	REJECT
1	Brand Channel 1	Contact 1	contact@brand.com	1234567890	India	Pending	2023-10-24	Approve	Reject
2	Brand Channel 2	Contact 2	contact@brand.com	1234567890	India	Pending	2023-10-24	Approve	Reject

25	Brand Channel 25	Contact 25	contact@brand.com	1234567890	India	Pending	2023-10-24	Approve	Reject

Figure 3 — Pending Approvals: per-row or bulk Approve / Reject

4. Workflow Control & Run Now

Toggle Active to pause/resume the schedule. **Run Now** asks for confirm, then fires today's eligible sends up to the daily cap.

Figure 4 — India / US workflow cards with Run Now + recent executions

Campaign	Schedule	From / reply
India	Mon–Sat 8:30 AM IST	shreyas@infopowerhousetech.in
US	Mon–Fri 10:00 AM ET	yash@powerhousetech.in

5. Settings (caps & cadence)

Edit in the portal Settings panel or the sheet **Settings** tab (Key | Value | Description). Applied on the next run — no restart.

Figure 5 — Live settings: daily caps, follow-up interval, max steps

Key	Default	Effect
India_Daily_Cap	30	Max India emails per run
US_Daily_Cap	30	Max US emails per run
FU_Interval_Days	3	Business days between follow-ups
Max_Sequence_Steps	10	After this many sends → Completed

Tip: set a Daily_Cap to 0 to pause that campaign for a day without deactivating the workflow.

6. Lead Table & sequence progress

Filter by status/campaign. Each row shows step progress and next send date. Empty next-send on In_Sequence = due now.

Figure 6 — Lead Table with sequence bar and next-send date

Step	Meaning
0	Initial email not sent yet
1	Initial sent · FU1 next
2+	Follow-up N–1 sent · next FU pending
= Max steps	Done · Status → Completed

7. Add a known contact (skip Apollo)

Use **Add Lead** in the portal, or append a sheet row. To email on the next run without approval:

Column	Value
Company / Contact / Title / Email	Required
Status	In_Sequence
Sequence_Step	0
Next_Send_Date	Leave blank
Country	India or United States

Use Status = Pending instead if you want it to show in Pending Approvals first.

8. Monitoring

Where	Check
Email Log (portal / sheet)	Every send: type (Initial / Follow-up N), subject, Sent/Failed
Lead Table	Status, step bar, Next_Send_Date
Workflow cards	Recent executions — open a row for error detail
Settings / Overview caps	Confirm daily caps before a big run

Common fixes

Symptom	Likely cause	Fix
0 emails sent	No due leads / cap 0	Check Next_Send_Date ≤ today; raise Daily_Cap
Workflow error	SMTP / Sheets / Claude credential	Ask ops to re-auth in n8n Credentials
Lead missing in portal	Status typo	Fix Status in sheet (Pending / In_Sequence)
Apollo returns 0	Filters too tight / no credits	Clear city override; check Apollo credit chip
Spam folder	Warming / volume	Lower Daily_Cap temporarily

9. Mid-week controls

Goal	How
Change daily volume	Edit India_Daily_Cap / US_Daily_Cap
Pause campaign today	Set that Daily_Cap to 0
Pause one lead	Status → Rejected (or anything ≠ In_Sequence)
Restart a lead	Status = In_Sequence · Step = 0 · Next_Send_Date blank
Widen follow-up gap	Raise FU_Interval_Days (future dates only)
Remove a lead	Delete sheet row (Email Log keeps history)

Sheet: India Leads · US Leads · Email Log · Settings · ID 1I-Mg8QEw90EfKUMQZgCKmKy2Jr4iX8JH3ur0rnw6MOM

Do not rotate shared env vars N8N_API_KEY or ADMIN_EMAILS — used by other products.
